MAIL DATE

DELIVERY MODE

03/03/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/569,832	Applicant(s) KOYAMA ET AL.	
	Examiner GREGORY CLARK	Art Unit 1794	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-11 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 7,250,226. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of US7250226 discloses a polymeric phosphorescent compound obtained by the copolymerization of a phosphorescent monomer unit and a hole transporting monomeric unit which is composed of triphenylamine or triphenylamine derivatives. Triphenylamine represents the genus from which the triphenylamine derivative species in applicant's claim 2 was derived. The species claimed in the instant application is merely a bis-triphenyl amine structure, a

Art Unit: 1794

doubled structure. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected a bis-triphenyl phosphine structure for the generic triphenyl phosphine structure claimed in 7,250,226 for the hole pendant group, as it is merely a doubled, bis, triphenyl amine structure where one would expect the properties of the bis amine to be additive over a single amine in functioning as a hole transport material.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7 are rejected under 35 U.S.C. 102(e) as being unpatentable over Tokito (2003/0091862), publication filed of 8/30/02.

Applicant claims a phosphorescent polymer represented by formula 1:

Art Unit: 1794

Regard Claims 1-7, Tokito discloses a phosphorescent polymer compound containing a phosphorescent monomer unit and a monomer unit represented by formula HT3 (page 6).

Structure P3 (page 7) shows a copolymer with a hole transporting side chain moiety attached directly to a polymerizable vinyl group of the main polymer chain and the phosphorescent side chain moiety is a transition metal complex that is connected via a polymerizable vinyl group to the main polymer chain. The reference clearly teaches that any of

Art Unit: 1794

the groups taught for hole transporting can be used as the side chain (i.e. HT-3) in place of the amine group disclosed in P3.

Therefore, Tokito clearly envisages the claimed copolymer.

Tokito also discloses that the polymer can contain electron transporting moieties which include monovalent groups of oxadiazole derivatives (structure ET1 and ET2), triazole derivatives (structure ET4), or imidazole derivatives (structure ET3) as shown on page

Tokito discloses an organic light-emitting device having one or more organic polymer layers interposed between an anode and a cathode, at least one layer of the organic polymer layers includes the phosphorescent compound (paragraph 68).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tokito (2003/0091862) as applied to claim 7 above, and further in view of Hatwar (6,127,004).

Regarding Claims 8-11, Tokito discloses a phosphorescent polymer compound containing a phosphorescent monomer unit but fails to teach an anode subjected to UV ozone irradiation treatment or high-frequency plasma treatment.

Hatwar discloses depositing a fluorocarbon layer between the anode and the hole-transport layer of the organic electroluminescent device (OLED) that decreases the drive voltage and significantly enhanced the operation stability of the device (column 3, lines 39-42). Hatwar also discloses that anode contact to an OLED can be significantly improved via oxygen plasma treatment and the resulting device can be operated at low voltages, and exhibits good stability (column 2, 31-35).

As decreasing the drive voltage and enhancing the operation stability of the device are desirable features, a person of ordinary skill in the art at the time of the invention would readily apply the anode treatment methods disclosed by Hatwar to the anode of the organic electroluminescent device of Tokito to produce a device with improved performance.

Art Unit: 1794

Combining the teachings of Tokito and Hatwar would produce the same organic electroluminescent device disclosed by the applicant.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to GREGORY CLARK whose telephone number is (571)270-7087. The examiner can normally be reached on M-Th 7:00 AM to 5 PM Alternating Fri 7:30 AM to 4 PM and Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Larry Tarazano can be reached on (571) 272-1515. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
